

Postmortem INC-7373: inventory-api upstream rate limiting (HTTP 429)

Date: April 2026. Duration: 34 minutes. Severity: SEV2.

Summary

Customers saw errors from inventory-api for 34 minutes. The trigger was upstream rate limiting (HTTP 429).

Timeline

09:12 alert fired. 09:20 incident declared. 09:49 mitigation applied.

Root cause

A change merged two days earlier removed a safety limit, so upstream rate limiting (HTTP 429) was able to build up unnoticed until peak traffic. Monitoring did not alert early because the threshold was set for the old traffic pattern.

Contributing factors

- The runbook pointed to a dashboard that had been renamed.
- The canary stage was skipped for a config-only change.

Action items

- AI-818: restore the safety limit and add a regression test.
- AI-799: update the alert threshold to the new traffic pattern.
- AI-763: never skip the canary, including for config changes.
